slow reactions that do not reach equilibrium, e.g. weathering) He in particular made contributions to the knowledge of the reactions at the interface of minerals and water. The European Association of Geochemistry quinquennially awards a Science Innovation Award medal named in his honour for work in low-temperature and surface geochemistry. Morgan (1970, Wiley; 3rd revised edition 1996) *Aquatic surface chemistry: chemical processes at the particle-water interface* (1987, Wiley) *Aquatic chemical kinetics: reaction rates of processes in natural waters* (1990, Wiley) Sources[edit] Morgan, J.. In his more than 200 scientific articles he showed, among other things, that the rate by which a mineral weathers depends on the surface charge, which in turn is controlled by factors such as pH and the chemical composition of aqueous solutions.
